

INTRODUCING CUB CADET LOW-LIFT SAND BLADES

HIGH-PERFORMANCE SAND BLADES FOR VERY DRY SANDY CONDITIONS

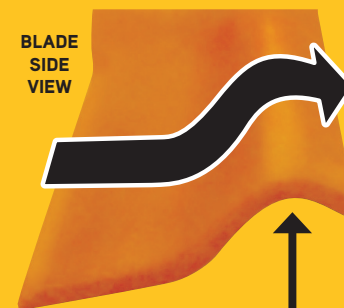

- Ideal for Southern and Coastal Regions with very dry and sandy conditions or for seasonal scalping
- Best for St. Augustine, Bahia, Zoysia, Centipede and Bermuda grass

SANDY REGIONS BY STATE

LOW-LIFT SAND BLADE

Sand flows over wing profile preventing wing wear, lasting up to three times longer than traditional blades.

The geometry creates a vacuum effect to lift grass, providing an excellent quality of cut.

BLADE LASTS 3X LONGER THAN A STANDARD HIGH-LIFT BLADE IN SANDY CONDITIONS

TRADITIONAL BLADE

Traditional blade edge wears quickly in sand.
